

Blythe-Bower Elementary School Highlights

School and Student Highlight

5th Grade

The 5th grade students at Blythe-Bower engineered prototypes to solve real problems as part of their engineering unit in science. Students engaged in the engineering design process to find solutions to real problems and had to present their work to their classmates and principal. Students were scored on a comprehensive rubric and the top ten projects presented their work to district-level administrators, who determined the top three presentations. All of the projects were displayed in the theatre for the rest of the school, providing students from K-4th the opportunity to admire the ingenuity of the 5th grade peers.
